

Updating the ActivInspire Driver

1. Log onto **Promethean Planet**- <http://www.prometheanplanet.com>

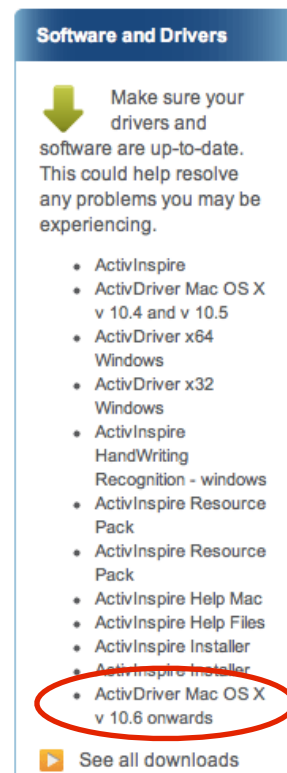

2. Click on **Support**

On the left side of the screen, click on **Software** and then **ActivInspire**.

Then, on the right side of the screen, click on **ActivDriver Mac OS X v 10.6 onwards**.

3. The file will begin downloading to your **Downloads** folder. **Before installing the file, be sure to quit the ActivInspire software and unplug the USB cable (that connects your board to your laptop).** Once the download is complete, double-click on the file in your **Downloads** folder and follow the prompts to complete the installation. Once the install completes, you can reconnect your board to your laptop and open ActivInspire.
